RISK AND REWARD PROFILE

The risk/reward indicator illustrates the trade-off between risk and potential returns when investing in the fund. The indicator is based on how the fund's value has fluctuated over the past five years.

This fund is in risk category 1, which entails a low risk of both increases and decreases in unit value. Category 1 does not mean that a fund is risk-free. A fund may move along the scale over time, to both the right and the left. This is because the indicator is based on historical data, which are no guarantee of future risks/rewards.

The risk scale illustrates the level of exposure to the fund's most significant risks. It does not illustrate the risk of:

Liquidity risk: occurs if a part of the fund's assets are difficult to sell at a certain point of time or at a reasonable price.

Credit risk: The risk of loss if the issuer of a fixed-income security is unable to make coupon payments or repay the principal on maturity.

Operational risks: Delays and errors in processes, political decisions, official decisions and so on may impact negatively on the fund.

Impact of financial techniques: Derivative instruments may be used for investment purposes, which may increase the fund's risk levels.
